

By Alex Tippett

Please Don't Feed This Bear.
"Why?" you ask.

This is what bears eat that they should eat.

This is what bears eat that they should not eat.

Sometimes bears learn to just wait for human food.

Bears should not eat human food because:

- They might get sick
- They might get in trouble with people
- They might forget how to be wild

There are easy ways to keep bears away from human food:

- Do not feed them
- Do not leave food in your car
- Close doors and windows in your house
- Put food in a bear box when camping
- Lock dumpsters
